THE SKINAA SKIN STUDY

A responsive skincare storefront concept

A calm, editorial shopping experience that brings dermatology-minded care, product discovery and daily routines into one coherent journey.

BOTANICAL

SOFT IVORY

WARM DETAIL

PROJECT DELIVERABLES

Concept, implementation and verification

This document summarizes the submitted design direction, working storefront features, technical approach, checks performed and boundaries that remain outside this assessment demo.

01 / VISUAL REFERENCE

Dimensional product study

An interactive CSS-built SPF packaging concept adds depth without a downloaded 3D model or WebGL runtime.

02 / VISUAL REFERENCE

Local product photography

Optimized local product images ground the concept in recognizable shop imagery and keep requests self-contained.

DESIGN INTENT

Premium, clean and approachable: consistent page framing, botanical color, clear hierarchy, deliberate whitespace and accessible motion.

A clearer path to care

The homepage connects brand storytelling to practical product exploration, with distinct internal pages for the next step.

01 / ARRIVE

Consistent hero and navigation

A branded homepage introduces the Skin Study, product-led calls to action and dermatologist-aware trust messaging.

02 / DISCOVER

Shop by category or concern

Dedicated category and concern pages, product filters, and concern-led recommendations help visitors narrow the edit.

03 / UNDERSTAND

Explore product and formula

Product detail pages present the local catalogue. The formula experience explains ingredient layers alongside the CSS product concept.

04 / BUILD

Plan an AM or PM routine

The routine builder supports step selection, product links and totals; the PM routine excludes sunscreen.

05 / CONTINUE

Use the local demo bag

Visitors can review selected products in a browser-local bag. Purchase checkout is intentionally not part of this demo.

PERSISTENCE	Demo bag, saved routine and skin journal stay in the visitor browser; they are not shared across devices.

What is included

Built as a lightweight storefront demonstration using the technologies needed for the assessment.

IMPLEMENTED	Working UI / browser demo	**NOT CONNECTED**	Live commerce services

Responsive storefront	Next.js and React pages for home, product, category, concern, doctors, formula, routine, about and bag.
Visual identity	Botanical green and ivory palette, editorial presentation, shared store shell and consistent navigation.
Interactive visualization	CSS 3D-style packaging concept with manual interaction and ingredient exploration; not a production 3D model.
Motion and adaptation	CSS motion, reduced-motion handling and lighter effects for exposed low-power / data-saving signals.
Discovery and routine	Concern-to-product recommendations, category navigation, routine selection and local persistence.
Shopping boundary	Local catalogue and browser-local demo bag. No Shopify integration, stock sync, checkout or payment processing.
Technology scope	Next.js + React frontend. No separate Express API or MongoDB database is needed for the current demo behavior.

CONVERSION RATIONALE

Prominent entry points, concern-led suggestions and routine context are intended to reduce discovery friction and guide visitors toward product details. Any conversion lift is a hypothesis until measured against a baseline.

Checks and honest boundaries

Build and browser checks were run for the current storefront. These results do not replace production monitoring or a formal audit.

PRODUCTION BUILD	Passed: Next.js optimized build generated 21 static pages; homepage first-load JS reported as 116 kB.
ROUTE SMOKE TEST	Main home, product, category, concern, doctors, formula, routine, about and bag routes returned HTTP 200; unknown route returned 404.
INTERACTION CHECK	Desktop category menu opened and toggled closed. Mobile menu tested at 375 px; no horizontal overflow observed.
DOCUMENTED VIEWPORTS	Project notes record checks at 320, 390, 768, 820, 1024 and 1440 px; viewport tests are not physical-device certification.

LIMITATIONS TO DISCLOSE

- No live Shopify products, inventory, customer accounts, discounts, cart API or checkout.
- No payments, orders, newsletter submission service or cross-device persistence.
- No conversion analytics or measured sales uplift; impact statements are design rationale only.
- No Lighthouse score, network timing study, WCAG certification, screen-reader audit or physical-device certification.

SUBMISSION NOTE

This is a responsive, interactive storefront redesign demo. It demonstrates product discovery and routine planning; it is not a production commerce integration. Conversion impact should be assessed with analytics only after a real store integration and an agreed measurement plan.
